

Connect flow, pressure and level sensors.

Interface to engines and controllers via RS232, RS485, Modbus or CAN.

Monitor water meters and engine data.

SMS and email alerts.

Integrated GPS for asset location.

Move more water. Visit fewer sites.

Monitor flow, pressure, engine performance and fuel remotely. Verify transferred volumes and detect pump faults before they interrupt operations.

Remotely start and stop pumps or automate operation based on tank level, pressure or flow.

Measure transferred water, monitor fuel consumption and improve pumping efficiency while reducing unnecessary site visits.

Why Senquip?

Connect to Anything

Interface to any engine, controller, or sensor, no matter the brand, physical interface, or protocol.

Process Everything

Edge process measured data, create custom alerts, and control connected systems.

Send Anywhere

Send data to the Senquip Portal or any other server. No ongoing costs, no lock in contracts.

Trusted Everywhere

Designed for use in harsh industrial, mining, and agricultural environments.

Senquip ORB

Recommended for exposed water transfer installations where maximum environmental protection, flexible sensor connectivity and local automation are required.

Senquip QUAD

Ideal where pumps integrate with multiple CAN networks, Variable Speed Drives or complex control systems.

Senquip Portal

View water levels, pump status, alarms and historical trends from anywhere. Configure devices remotely, update firmware and manage entire fleets through a secure cloud platform.

TELEMETRY FOR HARSH ENVIRONMENTS
