

Monitor battery voltage and charging system health.

Receive alerts for failed exercise runs and controller faults.

Connect to the generator controller via CAN or Modbus for monitoring and remote control.

Monitor fuel level and automatic transfer events.

Know your generator is ready when you need it most.

Monitor battery voltage, fuel level and controller status to ensure your generator is always ready to start.

Receive alerts for faults, failed exercise runs and low battery before they become critical problems.

Reduce maintenance costs, verify generator readiness and monitor your backup power systems from a single dashboard.

Why Senquip?

Connect to Anything

Interface to any engine, controller, or sensor, no matter the brand, physical interface, or protocol.

Process Everything

Edge process measured data, create custom alerts, and control connected systems.

Send Anywhere

Send data to the Senquip Portal or any other server. No ongoing costs, no lock in contracts.

Trusted Everywhere

Designed for use in harsh industrial, mining, and agricultural environments.

Senquip ORB

For extreme environments where IP ratings are essential and external antennas may be damaged. Typically mounted on poles, walls, and externally on machines

Senquip QUAD

For harsh environments where external antennas are a benefit. Typically found in electrical cabinets, in operator cabs, and mounted externally on machines.

Senquip Portal

The Senquip Portal is a secure cloud solution that offers a no-cost or low-cost device management and data hosting + analytics solution for Senquip devices.

CONNECTING MACHINES TO THE INTERNET
