

Connect wireless BLE pressure sensors without additional wiring.

Monitor air, hydraulic and process pressure from a single dashboard.

Install sensors on mobile equipment, pipelines, tanks and pneumatic systems.

Receive alerts when pressure falls outside normal operating limits.

Wireless Pressure Monitoring

Pressure is one of the earliest indicators of developing equipment problems. Wireless BLE pressure sensors provide continuous monitoring of air and hydraulic systems, helping detect leaks, blockages and equipment faults before they lead to downtime.

Real-time pressure data, trends and alerts help maintenance teams identify developing problems early, improve reliability and reduce unnecessary site visits.

Why Senquip?

Connect to Anything

Interface to any engine, controller, or sensor, no matter the brand, physical interface, or protocol.

Process Everything

Edge process measured data, create custom alerts, and control connected systems.

Send Anywhere

Send data to the Senquip Portal or any other server. No ongoing costs, no lock in contracts.

Trusted Everywhere

Designed for use in harsh industrial, mining, and agricultural environments.

Senquip ORB

For extreme environments where IP ratings are essential and external antennas may be damaged. Typically mounted on poles, walls, and externally on machines

Senquip QUAD

For harsh environments where external antennas are a benefit. Typically found in electrical cabinets, in operator cabs, and mounted externally on machines.

Senquip Portal

The Senquip Portal is a secure cloud solution that offers a no-cost or low-cost device management and data hosting + analytics solution for Senquip devices.

CONNECTING MACHINES TO THE INTERNET
