

Industrial Measurement

Monitor pressure, temperature, flow and level across industrial plant and processes.

Connect existing instrumentation to provide remote visibility of feedstocks, chemicals, water, effluent and other process measurements.

Receive alerts when measurements exceed operating limits, identify abnormal conditions early and reduce unnecessary manual inspections.

Connect directly to temperature and level sensors with 4-20mA and flow sensors with pulse inputs.

Monitor outputs from PLCs and sensors through Modbus and CAN.

Connect to Bluetooth wireless sensors.

Receive SMS and email alerts when parameters move beyond acceptable limits.

Why Senquip?

Connect to Anything

Interface to any engine, controller, or sensor, no matter the brand, physical interface, or protocol.

Process Everything

Edge process measured data, create custom alerts, and control connected systems.

Send Anywhere

Send data to the Senquip Portal or any other server. No ongoing costs, no lock in contracts.

Trusted Everywhere

Designed for use in harsh industrial, mining, and agricultural environments.

Senquip ORB

For extreme environments where IP ratings are essential and external antennas may be damaged. Typically mounted on poles, walls, and externally on machines

Senquip QUAD

For harsh environments where external antennas are a benefit. Typically found in electrical cabinets, in operator cabs, and mounted externally on machines.

Senquip Portal

The Senquip Portal is a secure cloud solution that offers a no-cost or low-cost device management and data hosting + analytics solution for Senquip devices.

TELEMETRY FOR HARSH ENVIRONMENTS
