

Monitor generators, batteries, solar and wind together.

Connect to multiple devices using CAN, Modbus and I/O.

Receive alerts for faults and critical operating conditions.

Optimise generator run time and fuel consumption.

Monitor every part of your hybrid power system.

Monitor generators, batteries, solar, wind and inverters from a single platform to understand system performance and energy flow.

Receive alerts for faults, low battery, fuel level and critical operating conditions before they impact system availability.

Reduce fuel consumption, optimise generator run time and monitor your entire hybrid power system from a single dashboard.

Why Senquip?

Connect to Anything

Interface to any engine, controller, or sensor, no matter the brand, physical interface, or protocol.

Process Everything

Edge process measured data, create custom alerts, and control connected systems.

Send Anywhere

Send data to the Senquip Portal or any other server. No ongoing costs, no lock in contracts.

Trusted Everywhere

Designed for use in harsh industrial, mining, and agricultural environments.

Senquip ORB

For extreme environments where IP ratings are essential and external antennas may be damaged. Typically mounted on poles, walls, and externally on machines

Senquip QUAD

For harsh environments where external antennas are a benefit. Typically found in electrical cabinets, in operator cabs, and mounted externally on machines.

Senquip Portal

The Senquip Portal is a secure cloud solution that offers a no-cost or low-cost device management and data hosting + analytics solution for Senquip devices.

CONNECTING MACHINES TO THE INTERNET
